DETAILED ACTION

Claims 1-55 are pending and at issue for examination.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-33, 44 and 45, drawn to a polynucleotide encoding a nucleic acid polymerase and a vector and host cell comprising said polynucleotide, classified in class 435, subclass 194.
- II. Claims 34-43, 46, drawn to a nucleic acid polymerase polypeptide, classified in class 435, subclass 194.
- III. Claims 47-55, drawn to a method for synthesizing DNA, classified in class 435, subclass 91.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to divergent molecules having different structures, functions and effects. The polynucleotides of group I are made up of nucleic acids and can be used in hybridization assays as well as in expression methods for producing the polypeptides. The polypeptides are made up of amino acids and function as polymerase polypeptides.

Inventions II and inventions III are related as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the polypeptide of group I can be used in a materially different process such as one in which the polypeptide is used to synthesize antibodies against the polypeptide.

The polynucleotide of group I is unrelated to the method of group III, as they are neither used nor made by the method of group III.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the literature and sequence searches required for each of the Groups are not required for another of the Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard G. Hutson whose telephone number is 571-272-0930. The examiner can normally be reached on M-F, 7:00-4:00.
